Chapter 1

Data Structure Index

1.1 Data Structures

Here are the data structures with brief descriptions:

Course	5
Flags	5
Generations	5
Lecture	6
OffTime	6
Room	6
SemesterData	6
Specialization	7
Teacher	7

Chapter 2

File Index

2.1 File List

Here is a list of all documented files with brief descriptions:

C:/Skole/Uni/Projekt/P1/Git/src/ config_reader.c	
This script is responsible for reading the data file	9
C:/Skole/Uni/Projekt/P1/Git/src/ config_reader.h	
This file contains prototypes required by the config_reader.c (p. 9) script	12
C:/Skole/Uni/Projekt/P1/Git/src/ data_test.c	
This script contains the functions responsible for performing tests on the generations	14
C:/Skole/Uni/Projekt/P1/Git/src/ data_test.h	
This file contains prototypes required by the data_test.c (p. 14) script	17
C:/Skole/Uni/Projekt/P1/Git/src/ data_utility.h	??
C:/Skole/Uni/Projekt/P1/Git/src/ defs.h	
This file contains the defines required by the program	19
C:/Skole/Uni/Projekt/P1/Git/src/ html_output.c	
The html output script is responsible for the html schedules that is being generated	19
C:/Skole/Uni/Projekt/P1/Git/src/ html_output.h	
This file contains prototypes required by the html_output.c (p. 19) script	23
C:/Skole/Uni/Projekt/P1/Git/src/ scheduler.c	
The main script of the program, the magic starts here	23
C:/Skole/Uni/Projekt/P1/Git/src/ scheduler.h	??
C:/Skole/Uni/Projekt/P1/Git/src/ structs.h	
The header file containing all the structs required by the program	25

Chapter 3

Data Structure Documentation

3.1 Course Struct Reference

Data Fields

- char **name** [64]
- int **totLectures**
- int **numTeachers**
- **Teacher** ** **teachers**

The documentation for this struct was generated from the following file:

- C:/Skole/Uni/Projekt/P1/Git/src/**structs.h**

3.2 Flags Struct Reference

Data Fields

- int **doubleBookingRoom**
- int **doubleBookingLecture**
- int **lectureOverflow**
- int **semesterOverflow**

The documentation for this struct was generated from the following file:

- C:/Skole/Uni/Projekt/P1/Git/src/**structs.h**

3.3 Generations Struct Reference

Data Fields

- int **numLectures**
- **Lecture** * **schedules** [GENERATION_SIZE]

The documentation for this struct was generated from the following file:

- C:/Skole/Uni/Projekt/P1/Git/src/**structs.h**

3.4 Lecture Struct Reference

Data Fields

- int **day**
- int **period**
- **Room** * **assignedRoom**
- **Course** * **assignedCourse**
- int **fitness**
- **Flags** **flags**

The documentation for this struct was generated from the following file:

- C:/Skole/Uni/Projekt/P1/Git/src/**structs.h**

3.5 OffTime Struct Reference

Data Fields

- int **day**
- int **periods** [MAX_PERIODS]

The documentation for this struct was generated from the following file:

- C:/Skole/Uni/Projekt/P1/Git/src/**structs.h**

3.6 Room Struct Reference

Data Fields

- char **name** [32]
- int **seats**

The documentation for this struct was generated from the following file:

- C:/Skole/Uni/Projekt/P1/Git/src/**structs.h**

3.7 SemesterData Struct Reference

Data Fields

- int **numWeeks**
- int **numRooms**
- **Room** * **rooms**
- int **numTeachers**
- **Teacher** * **teachers**
- int **numCourses**
- **Course** * **courses**
- int **numSpecializations**
- **Specialization** * **specializations**

- Generation * **generation**

The documentation for this struct was generated from the following file:

- C:/Skole/Uni/Projekt/P1/Git/src/**structs.h**

3.8 Specialization Struct Reference

Data Fields

- char **name** [32]
- int **numStudents**
- int **numCourses**
- **Course** ** **courses**

The documentation for this struct was generated from the following file:

- C:/Skole/Uni/Projekt/P1/Git/src/**structs.h**

3.9 Teacher Struct Reference

Data Fields

- char **name** [32]
- int **numOffTimes**
- **OffTime** * **offTimes**

The documentation for this struct was generated from the following file:

- C:/Skole/Uni/Projekt/P1/Git/src/**structs.h**

Chapter 4

File Documentation

4.1 C:/Skole/Uni/Projekt/P1/Git/src/config_reader.c File Reference

This script is responsible for reading the data file.

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include <ctype.h>
#include "structs.h"
#include "config_reader.h"
#include "defs.h"
```

Macros

- **#define BUFFER_SIZE 512**

Functions

- **int read_config** (char *fileName, **SemesterData** *sd)
Initial function for the config reader.
- **void handle_line** (char *line, **SemesterData** *sd)
This function handles the lines from the main config reader function.
- **int read_int** (char *line, int *position, int *out)
Reads an int from a string and adds the amount of digits to position.
- **int read_multiple_words** (char *line, int *position, char *out)
Reads an entire string between two apostrophes.
- **void add_teacher** (**SemesterData** *sd, char *name, int numOffTimes, **OffTime** *offTimes)
Adds a teacher to the teachers array.
- **void add_room** (**SemesterData** *sd, char *name, int seats)
Adds a room to the rooms array.
- **void add_course** (**SemesterData** *sd, char *name, int totLectures, int numTeachers, **Teacher** **teachers)
Adds a course to the courses array.
- **void add_specialization** (**SemesterData** *sd, char *name, int numStudents, int numCourses, **Course** **courses)
Adds a specialization to the specializations array.

4.1.1 Detailed Description

This script is responsible for reading the data file.

4.1.2 Function Documentation

4.1.2.1 void add_course (SemesterData * sd, char * name, int totLectures, int numTeachers, Teacher ** teachers)

Adds a course to the courses array.

Parameters

in	<i>sd</i>	The courses array is part of the SemesterData (p. 6) struct
in	<i>name</i>	The name of the course
in	<i>totLectures</i>	The total amount of lectures in the course
in	<i>numTeachers</i>	The amount of teachers assigned to the course
in	<i>teachers</i>	The array of teachers assigned

Allocates the memory needed and updates relevant variables and values

4.1.2.2 void add_room (SemesterData * sd, char * name, int seats)

Adds a room to the rooms array.

Parameters

in	<i>sd</i>	The rooms array is part of the SemesterData (p. 6) struct
in	<i>name</i>	The name of the room
in	<i>seats</i>	The amount of seats available in the room

Allocates the memory needed and updates relevant variables and values

4.1.2.3 void add_specialization (SemesterData * sd, char * name, int numStudents, int numCourses, Course ** courses)

Adds a specialization to the specializations array.

Parameters

in	<i>sd</i>	The specialization array is part of the SemesterData (p. 6) struct
in	<i>name</i>	The name of the specialization
in	<i>numStudents</i>	The total amount of students in the specialization
in	<i>numCourses</i>	The amount of courses assigned to the specialization
in	<i>courses</i>	The array of courses assigned

Allocates the memory needed and updates relevant variables and values

4.1.2.4 void add_teacher (SemesterData * sd, char * name, int numOffTimes, OffTime * offTimes)

Adds a teacher to the teachers array.

Parameters

in	<i>sd</i>	The teachers array is part of the SemesterData (p. 6) struct
in	<i>name</i>	The name of the teacher
in	<i>numOffTimes</i>	The amount of off times

in	<i>offTimes</i>	An array of offTimes
----	-----------------	----------------------

Allocates the memory needed and updates relevant variables and values

4.1.2.5 void handle_line (char * *line*, SemesterData * *sd*)

This function handles the lines from the main config reader function.

Parameters

in	<i>line</i>	This line is given by the config_reader function
in	<i>sd</i>	SemesterData (p. 6) is a link to the structs the function needs

This function goes through the line and checks it for commands and parameters. Essentially it works like a parser

4.1.2.6 int read_config (char * *fileName*, SemesterData * *sd*)

Initial function for the config reader.

Parameters

in	<i>fileName</i>	The name of the file to read from
in	<i>sd</i>	SemesterData (p. 6) is a link to our structs that we will need for this function

Returns

Returns 1 or 0 depending weather the function succeded or failed

The function reads the file line by line and formats them to the format we need for further processing, then sends it to handle_line

4.1.2.7 int read_int (char * *line*, int * *position*, int * *out*)

Reads an int from a string and adds the amount of digits to position.

Parameters

in	<i>line</i>	The string to read
in	<i>position</i>	Current position in the string
out	<i>out</i>	A pointer to an int where the final number will be stored

Returns

Returns weather the function has failed or succeded

The function goes through the string (line) until there are no more characters. It then converts the content of the string to int and outputs it to the out variable

4.1.2.8 int read_multiple_words (char * *line*, int * *position*, char * *out*)

Reads an entire string between two apostrophes.

Parameters

in	<i>line</i>	The string to read from
----	-------------	-------------------------

in	<i>position</i>	The current position in the string
out	<i>out</i>	The output string

Returns

Returns whether the function succeeded or not

This function reads from the line string and outputs everything between two apostrophes to the output string

4.2 C:/Skole/Uni/Projekt/P1/Git/src/config_reader.h File Reference

This file contains prototypes required by the **config_reader.c** (p. 9) script.

Functions

- **int read_config** (char *fileName, **SemesterData** *data)
Initial function for the config reader.
- **void handle_line** (char *line, **SemesterData** *data)
This function handles the lines from the main config reader function.
- **int read_int** (char *line, int *position, int *out)
Reads an int from a string and adds the amount of digits to position.
- **int read_multiple_words** (char *line, int *position, char *out)
Reads an entire string between two apostrophes.
- **void add_teacher** (**SemesterData** *sd, char *name, int numOffTimes, **OffTime** *offTimes)
Adds a teacher to the teachers array.
- **void add_room** (**SemesterData** *sd, char *name, int seats)
Adds a room to the rooms array.
- **void add_course** (**SemesterData** *sd, char *name, int totLectures, int numTeachers, **Teacher** **teachers)
Adds a course to the courses array.
- **void add_specialization** (**SemesterData** *sd, char *name, int numStudents, int numCourses, **Course** **courses)
Adds a specialization to the specializations array.

4.2.1 Detailed Description

This file contains prototypes required by the **config_reader.c** (p. 9) script.

4.2.2 Function Documentation

4.2.2.1 void add_course (**SemesterData** * sd, char * name, int totLectures, int numTeachers, **Teacher** ** teachers)

Adds a course to the courses array.

Parameters

in	<i>sd</i>	The courses array is part of the SemesterData (p. 6) struct
in	<i>name</i>	The name of the course

in	<i>totLectures</i>	The total amount of lectures in the course
in	<i>numTeachers</i>	The amount of teachers assigned to the course
in	<i>teachers</i>	The array of teachers assigned

Allocates the memory needed and updates relevant variables and values

4.2.2.2 void add_room (SemesterData * sd, char * name, int seats)

Adds a room to the rooms array.

Parameters

in	<i>sd</i>	The rooms array is part of the SemesterData (p. 6) struct
in	<i>name</i>	The name of the room
in	<i>seats</i>	The amount of seats available in the room

Allocates the memory needed and updates relevant variables and values

4.2.2.3 void add_specialization (SemesterData * sd, char * name, int numStudents, int numCourses, Course ** courses)

Adds a specialization to the specializations array.

Parameters

in	<i>sd</i>	The specialization array is part of the SemesterData (p. 6) struct
in	<i>name</i>	The name of the specialization
in	<i>numStudents</i>	The total amount of students in the specialization
in	<i>numCourses</i>	The amount of courses assigned to the specialization
in	<i>courses</i>	The array of courses assigned

Allocates the memory needed and updates relevant variables and values

4.2.2.4 void add_teacher (SemesterData * sd, char * name, int numOffTimes, OffTime * offTimes)

Adds a teacher to the teachers array.

Parameters

in	<i>sd</i>	The teachers array is part of the SemesterData (p. 6) struct
in	<i>name</i>	The name of the teacher
in	<i>numOffTimes</i>	The amount of off times
in	<i>offTimes</i>	An array of offTimes

Allocates the memory needed and updates relevant variables and values

4.2.2.5 void handle_line (char * line, SemesterData * sd)

This function handles the lines from the main config reader function.

Parameters

in	<i>line</i>	This line is given by the config_reader function
in	<i>sd</i>	SemesterData (p. 6) is a link to the structs the function needs

This function goes through the line and checks it for commands and parameters. Essentially it works like a parser

4.2.2.6 int read_config (char * fileName, SemesterData * sd)

Initial function for the config reader.

Parameters

in	<i>fileName</i>	The name of the file to read from
in	<i>sd</i>	SemesterData (p. 6) is a link to our structs that we will need for this function

Returns

Returns 1 or 0 depending weather the function succeded or failed

The function reads the file line by line and formats them to the format we need for further processing, then sends it to `handle_line`

4.2.2.7 int read_int (char * line, int * position, int * out)

Reads an int from a string and adds the amount of digits to position.

Parameters

in	<i>line</i>	The string to read
in	<i>position</i>	Current position in the string
out	<i>out</i>	A pointer to an int where the final number will be stored

Returns

Returns weather the function has failed or succeded

The function goes through the string (line) until there are no more characters. It then converts the content of the string to int and outputs it to the out variable

4.2.2.8 int read_multiple_words (char * line, int * position, char * out)

Reads an entire string between two apostrophes.

Parameters

in	<i>line</i>	The string to read from
in	<i>position</i>	The current position in the string
out	<i>out</i>	The output string

Returns

Returns weather the function succeded or not

This function reads from the line string and outputs everything between two apostrophes to the output string

4.3 C:/Skole/Uni/Projekt/P1/Git/src/data_test.c File Reference

This script contains the functions responsible for performing tests on the generations.

```
#include <stdio.h>
#include <stdlib.h>
#include <math.h>
#include "structs.h"
#include "data_utility.h"
#include "defs.h"
#include "data_test.h"
```

Functions

- **int test_lecture_capacity (SemesterData *sd, Lecture *lect)**
Test how well the lecture fits into the assigned room.
- **int test_teacher_availability (SemesterData *sd, Lecture *lect)**
Test whether the teacher has an offtime on a given date.
- **int test_doublebooking (SemesterData *sd, Lecture *lect)**
Test for doublebooking.
- **int test_weekly_distribution (SemesterData *sd, Lecture *lect)**
Test distribution on a weekly basis to ensure an even workload.
- **int test_semester_distribution (SemesterData *sd, Lecture *lect)**
Tests the semester distribution.
- **int test_semester_distribution_inner (SemesterData *sd, Lecture *lect, Specialization *sp)**
Test how the lecture fits into the semester distribution.

4.3.1 Detailed Description

This script contains the functions responsible for performing tests on the generations.

4.3.2 Function Documentation

4.3.2.1 int test_doublebooking (SemesterData * sd, Lecture * lect)

Test for doublebooking.

Parameters

in	sd	SemesterData (p. 6) contains all the information about the structs needed for this function
in	lect	Pointer to lecture to test

Returns

Returns the severity of the test. Aka. Fitness

Performs tests for both room and lecture doublebooking

4.3.2.2 int test_lecture_capacity (SemesterData * sd, Lecture * lect)

Test how well the lecture fits into the assigned room.

Parameters

in	sd	SemesterData (p. 6) contains all the information about the structs needed for this function
in	lect	Pointer to lecture to test

Returns

Returns the severity of the test. Aka. Fitness

This function checks the capacity of the room and the amount of students on the lecture and determines the penalty in fitness by comparing the two.

4.3.2.3 int test_semester_distribution (SemesterData * sd, Lecture * lect)

Tests the semester distribution.

Parameters

in	<i>sd</i>	SemesterData (p. 6) contains all the information about the structs needed for this function
in	<i>lect</i>	Pointer to lecture to test

Returns

Returns the severity of the test. Aka. Fitness

Makes a call to the inner test function for every specialization on the specified lecture

4.3.2.4 int test_semester_distribution_inner (SemesterData * *sd*, Lecture * *lect*, Specialization * *sp*)

Test how the lecture fits into the semester distribution.

Parameters

in	<i>sd</i>	SemesterData (p. 6) contains all the information about the structs needed for this function
in	<i>lect</i>	Pointer to lecture to test
in	<i>sp</i>	????????????????????????????????

Returns

Returns the severity of the test. Aka. Fitness

Details

4.3.2.5 int test_teacher_availability (SemesterData * *sd*, Lecture * *lect*)

Test whether the teacher has an offtime on a given date.

Parameters

in	<i>sd</i>	SemesterData (p. 6) contains all the information about the structs needed for this function
in	<i>lect</i>	Pointer to lecture to test

Returns

Returns the severity of the test. Aka. Fitness

Also test whether the teacher is already assigned to a lecture on the same date

4.3.2.6 int test_weekly_distribution (SemesterData * *sd*, Lecture * *lect*)

Test distribution on a weekly basis to ensure an even workload.

Parameters

in	<i>sd</i>	SemesterData (p. 6) contains all the information about the structs needed for this function
----	-----------	--

<i>in</i>	<i>lect</i>	Pointer to lecture to test
-----------	-------------	----------------------------

Returns

Returns the severity of the test. Aka. Fitness

Details

4.4 C:/Skole/Uni/Projekt/P1/Git/src/data_test.h File Reference

This file contains prototypes required by the **data_test.c** (p. 14) script.

Functions

- **int test_lecture_capacity (SemesterData *sd, Lecture *lect)**
Test how well the lecture fits into the assigned room.
- **int test_overlap (SemesterData *sd, Lecture *lect)**
- **int test_teacher_availability (SemesterData *sd, Lecture *lect)**
Test whether the teacher has an offtime on a given date.
- **int test_doublebooking (SemesterData *sd, Lecture *lect)**
Test for doublebooking.
- **int test_weekly_distribution (SemesterData *sd, Lecture *lect)**
Test distribution on a weekly basis to ensure an even workload.
- **int test_semester_distribution (SemesterData *sd, Lecture *lect)**
Tests the semester distribution.
- **int test_semester_distribution_inner (SemesterData *sd, Lecture *lect, Specialization *sp)**
Test how the lecture fits into the semester distribution.

4.4.1 Detailed Description

This file contains prototypes required by the **data_test.c** (p. 14) script.

4.4.2 Function Documentation

4.4.2.1 int test_doublebooking (SemesterData * sd, Lecture * lect)

Test for doublebooking.

Parameters

<i>in</i>	<i>sd</i>	SemesterData (p. 6) contains all the information about the structs needed for this function
<i>in</i>	<i>lect</i>	Pointer to lecture to test

Returns

Returns the severity of the test. Aka. Fitness

Performs tests for both room and lecture doublebooking

4.4.2.2 int test_lecture_capacity (SemesterData * sd, Lecture * lect)

Test how well the lecture fits into the assigned room.

Parameters

in	<i>sd</i>	SemesterData (p. 6) contains all the information about the structs needed for this function
in	<i>lect</i>	Pointer to lecture to test

Returns

Returns the severity of the test. Aka. Fitness

This function checks the capacity of the room and the amount of students on the lecture and determines the penalty in fitness by comparing the two.

4.4.2.3 int test_semester_distribution (SemesterData * sd, Lecture * lect)

Tests the semester distribution.

Parameters

in	<i>sd</i>	SemesterData (p. 6) contains all the information about the structs needed for this function
in	<i>lect</i>	Pointer to lecture to test

Returns

Returns the severity of the test. Aka. Fitness

Makes a call to the inner test function for every specialization on the specified lecture

4.4.2.4 int test_semester_distribution_inner (SemesterData * sd, Lecture * lect, Specialization * sp)

Test how the lecture fits into the semester distribution.

Parameters

in	<i>sd</i>	SemesterData (p. 6) contains all the information about the structs needed for this function
in	<i>lect</i>	Pointer to lecture to test
in	<i>sp</i>	??

Returns

Returns the severity of the test. Aka. Fitness

Details**4.4.2.5 int test_teacher_availability (SemesterData * sd, Lecture * lect)**

Test whether the teacher has an offtime on a given date.

Parameters

in	<i>sd</i>	SemesterData (p. 6) contains all the information about the structs needed for this function
----	-----------	--

<i>in</i>	<i>lect</i>	Pointer to lecture to test
-----------	-------------	----------------------------

Returns

Returns the severity of the test. Aka. Fitness

Also test whether the teacher is already assigned to a lecture on the same date

4.4.2.6 int test_weekly_distribution (SemesterData * sd, Lecture * lect)

Test distribution on a weekly basis to ensure an even workload.

Parameters

<i>in</i>	<i>sd</i>	SemesterData (p. 6) contains all the information about the structs needed for this function
<i>in</i>	<i>lect</i>	Pointer to lecture to test

Returns

Returns the severity of the test. Aka. Fitness

Details**4.5 C:/Skole/Uni/Projekt/P1/Git/src/defs.h File Reference**

This file contains the defines required by the program.

Macros

- #define **MAX_PERIODS** 2
- #define **DAYS_PER_WEEK** 5
- #define **GENERATION_SIZE** 100
- #define **ERROR_OUT_OF_MEMORY** 1
- #define **ERROR_ARRAY_BOUNDS_EXCEEDED** 2

4.5.1 Detailed Description

This file contains the defines required by the program.

4.6 C:/Skole/Uni/Projekt/P1/Git/src/html_output.c File Reference

The html output script is responsible for the html schedules that is being generated.

```
#include <stdio.h>
#include <stdlib.h>
#include <time.h>
#include <stdarg.h>
#include "defs.h"
#include "structs.h"
#include "data_utility.h"
```

Macros

- `#define WEEK_WIDTH 10.0f`
- `#define TABLE_WIDTH 100.0f`

Functions

- void **print_file_header** (FILE *f, char *pageTitle)
Prints the file header.
- void **print_footer** (FILE *f)
Prints the file footer.
- void **begin_print_table** (FILE *f, int cellspacing)
Initiates a table.
- void **end_print_table** (FILE *f)
Ends a table.
- void **print_row_header** (FILE *f, double width, const char *str,...)
Prints a header for a row.
- void **print_title** (FILE *f, const char *title)
Prints a shedule title.
- void **begin_print_data** (FILE *f, const char *str)
Brief.
- void **end_print_data** (FILE *f)
Ends the data print.
- void **begin_print_row** (FILE *f, const char *backgroundColor)
Prints the rows of lectures.
- void **end_print_row** (FILE *f)
Ends the row print.
- void **print_period** (SemesterData *sd, Specialization *sp, FILE *f, int periodId, int weekNumber)
Prints a period to the schedule.
- void **print_schedule_to_file** (SemesterData *sd, Specialization *sp, const char *fileName)
Prints a schedule for a specific specialization to a file.

4.6.1 Detailed Description

The html output script is responsible for the html schedules that is being generated.

4.6.2 Function Documentation

4.6.2.1 void begin_print_data (FILE * f, const char * str)

Brief.

Parameters

in	f	The file in which the schedule is being generated
in	str	The data to be printed

This function is printing the provided data from str into the file f

4.6.2.2 void begin_print_row (FILE * f, const char * backgroundColor)

Prints the rows of lectures.

Parameters

<code>in</code>	<code>f</code>	The file in which the schedule is being generated
<code>in</code>	<code>backgroundColor</code>	The color of the row

This function initiates rows with a given color

4.6.2.3 void begin_print_table (FILE * *f*, int *cellspacing*)

Initiates a table.

Parameters

<code>in</code>	<code>f</code>	The file in which the schedule is being generated
<code>in</code>	<code>cellspacing</code>	The spacing between the cells in the table

This function is laying the foundation for a html table

4.6.2.4 void end_print_data (FILE * *f*)

Ends the data print.

Parameters

<code>in</code>	<code>f</code>	The file in which the schedule is being generated
-----------------	----------------	---

Adds the ending tag for the data

4.6.2.5 void end_print_row (FILE * *f*)

Ends the row print.

Parameters

<code>in</code>	<code>f</code>	The file in which the schedule is being generated
-----------------	----------------	---

This function adds the ending tag for the row

4.6.2.6 void end_print_table (FILE * *f*)

Ends a table.

Parameters

<code>in</code>	<code>f</code>	The file in which the schedule is being generated
-----------------	----------------	---

This function is adding the end table tag for a html table

4.6.2.7 void print_file_header (FILE * *f*, char * *pageTitle*)

Prints the file header.

Parameters

<code>in</code>	<code>f</code>	The file in which the schedule is being generated
<code>in</code>	<code>pageTitle</code>	The name of the page

This function is responsible for the header of the file

4.6.2.8 void print_footer (FILE * *f*)

Prints the file footer.

Parameters

in	<i>f</i>	The file in which the schedule is being generated
----	----------	---

This function is responsible for the footer of the file

4.6.2.9 void print_period (SemesterData * *sd*, Specialization * *sp*, FILE * *f*, int *periodId*, int *weekNumber*)

Prints a period to the schedule.

Parameters

in	<i>sd</i>	SemesterData (p. 6) contains the required information about the data that should be printed
in	<i>sp</i>	Specialization (p. 7) contains information about the specialization the schedule is generated for
in	<i>f</i>	The file in which the schedule is being generated
in	<i>periodId</i>	????????????
in	<i>weekNumber</i>	The number of the current week

This function adds a period to the schedule and formats it as needed

4.6.2.10 void print_row_header (FILE * *f*, double *width*, const char * *str*, ...)

Prints a header for a row.

Parameters

in	<i>f</i>	The file in which the schedule is being generated
in	<i>width</i>	The width of the row
in	<i>str</i>	The name of the row
in	...	????????????

This function creates a row with the given width and name

4.6.2.11 void print_schedule_to_file (SemesterData * *sd*, Specialization * *sp*, const char * *fileName*)

Prints a schedule for a specific specialization to a file.

Parameters

in	<i>sd</i>	SemesterData (p. 6) contains the required information about the data that should be printed
in	<i>sp</i>	Specialization (p. 7) contains information about the specialization the schedule is generated for
in	<i>fileName</i>	The name of the file in which the schedule should be generated

The final step of the schedule creation

4.6.2.12 void print_title (FILE * *f*, const char * *title*)

Prints a shedule title.

Parameters

in	<i>f</i>	The file in which the schedule is being generated
in	<i>title</i>	The title

This defines a title for the schedule. An example could be "Schedule for Robotics"

4.7 C:/Skole/Uni/Projekt/P1/Git/src/html_output.h File Reference

This file contains prototypes required by the **html_output.c** (p. 19) script.

Functions

- void **print_schedule_to_file** (**SemesterData** *sd, **Specialization** *sp, const char *fileName)
Prints a schedule for a specific specialization to a file.

4.7.1 Detailed Description

This file contains prototypes required by the **html_output.c** (p. 19) script.

4.7.2 Function Documentation

4.7.2.1 void **print_schedule_to_file** (**SemesterData** * sd, **Specialization** * sp, const char * *fileName*)

Prints a schedule for a specific specialization to a file.

Parameters

in	sd	SemesterData (p. 6) contains the required information about the data that should be printed
in	sp	Specialization (p. 7) contains information about the specialization the schedule is generated for
in	fileName	The name of the file in which the schedule should be generated

The final step of the schedule creation

4.8 C:/Skole/Uni/Projekt/P1/Git/src/scheduler.c File Reference

The main script of the program, the magic starts here.

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include <time.h>
#include "structs.h"
#include "scheduler.h"
#include "config_reader.h"
#include "data_utility.h"
#include "data_test.h"
#include "defs.h"
#include "html_output.h"
```

Functions

- int **compare_time** (const void *a, const void *b)
A function to compare times of two lectures.
- int **generate_next** (**SemesterData** *sd)
Brief.
- int **main** (void)
The main function.

- void **generate_initial_schedule** (**SemesterData** *sd)
Generate a 'dumb' schedule (array of lectures)
- void **free_all** (**SemesterData** *sd)
*Free all memory associated with the **SemesterData** (p. 6) struct.*

4.8.1 Detailed Description

The main script of the program, the magic starts here.

4.8.2 Function Documentation

4.8.2.1 int compare_time (const void * a, const void * b)

A function to compare times of two lectures.

Parameters

in	<i>a</i>	Lecture (p. 6) one
in	<i>b</i>	Lecture (p. 6) two

Returns

Returns a value to qsort in order to determin the way to order the lectures array

This function is run by qsort. The function starts by comparing the two lectures by day. If they have the same day, they are compared by period

4.8.2.2 void free_all (**SemesterData** * sd)

Free all memory associated with the **SemesterData** (p. 6) struct.

Parameters

in	<i>sd</i>	The SemesterData (p. 6) struct
----	-----------	---------------------------------------

Run by main. Dynamically allocated arrays inside the structs are also freed.

4.8.2.3 void generate_initial_schedule (**SemesterData** * sd)

Generate a 'dumb' schedule (array of lectures)

Parameters

in	<i>sd</i>	SemesterData (p. 6) contains all the information about the structs needed for this function
----	-----------	--

Run by main. The only fulfilled requirement is the amount of lectures per course

4.8.2.4 int generate_next (**SemesterData** * sd)

Brief.

Parameters

<code>in</code>	<code>sd</code>	SemesterData (p. 6) contains all the information about the structs needed for this function
-----------------	-----------------	--

Returns

Returns the combined fitness of ?

Run by main

4.8.2.5 int main (void)

The main function.

Returns

Returns a value based on how the program exited

Run by the OS

4.9 C:/Skole/Uni/Projekt/P1/Git/src/structs.h File Reference

The header file containing all the structs required by the program.

```
#include "defs.h"
```

Data Structures

- struct **Room**
- struct **OffTime**
- struct **Teacher**
- struct **Course**
- struct **Specialization**
- struct **Flags**
- struct **Lecture**
- struct **SemesterData**
- struct **Generations**

4.9.1 Detailed Description

The header file containing all the structs required by the program.
